34, Prabhu Shree Ram Mandir Marg, 4th Kumbharwada, Dodia House, 1st Floor, Mumbai-400004

Tel: +91-22-2381 3375, 5636 2504 , FaxNo.: +91-22-2385 6825

Email: info@marutimetalindustries.com, Website: www.marutimetalindustries.com

ABOUT US:

Maruti Metal Industries is an ISO 9001 2000 certified company. We take the pleasure to introduce ourselves as one the largest IMPORTERS, STOCK HOLDERS & SUPPLIERS of NON-FERROUS METALS AND STAINLESS STEEL, SHEET, PLATES, COILS, TUBES, PIPES, RODS, WIRES, FLATS, STRUCTURAL, FITTINGS, FLANGES, Alloy Steel, Mild Steel Products.

Confirming to TP-202, 304, 304L, 309, 310, 310S, 316, 316S, 316TI, 321, 410, 430, 904L, NICKLE, MONEL, INCONEL, TITANIUM & ALL HIGH NICKLE GRADES.

ALL ITEMS IN BRASS, COPPER, ALUMINUM, CARBON STEEL, MILD STEEL & BOILER QUALITY (BQ) ITEMS.

Being all leading stockiests, we are in a position to cater all your requirements of the above mentioned items. We are regularly supplying these items to many leading industrial Units consisting of CHEMICALS/ FERTILIZERS/PETROCHEMICAL PLANTS, PAPER MILLS, CEMENT PLANTS/ SUGAR MILL/ FABRICATION UNITS etc.

We also supply these items especially Stainless Steel Sheets/ Plates/ Coils/ Pipes to Engi

QUALITY POLIC

Strict quality assurance system is being followed in all our departments and Total Quality Management is applied to streamline and all the procedures and practices in operation to achieve high standard of efficiency. Continuous efforts are being made for improvement of materials technology and equipments to give best quality products at the most affordable prices.

The quality assurance dept oversees all important quality functions and performs the following activities :

- 1) The system controls the quality of all incoming materials as per the raw material test certificate of the material. Randomly checking in each size for chemical and physical properties at Government approved laboratory.
- 2) During forming, pressing, forging and heat treatment process control system outlines inprocess checks and controls to be followed during heat treatment and testing.
- 3) Suitable fixtures and templates are used to maintain dimensional accuracy; necessary gauges and callipers are calibrated periodically to maintain their accuracy.
- 4) Fittings are supplied with test certificate as per approved QAP. Test certificates incorporate chemical composition, mechanical properties, hardness detail of heat treatment, Ultrasonic test, Radiography test and stamping details.

QUALITY OBJECTIVES:

We consider three elements to be essential for the overall quality of the company services :

INDEPENDENCE & OBJECTIVITY
TECHNICAL & SCIENTIFIC QUALITY
PRACTICAL BENEFITS TO CLIENTS.

QUALITY ACTVITIES:

The quality assurance dept oversees all important quality functions and performs the following activities :

- 1) The system controls the quality of all incoming materials as per the raw material test certificate of the material. Randomly checking in each size for chemical and physical properties at Government approved laboratory.
- 2) During forming, pressing, forging and heat treatment process control system outlines inprocess checks and controls to be followed during heat treatment and testing.
- 3) Suitable fixtures and templates are used to maintain dimensional accuracy; necessary gauges and callipers are calibrated periodically to maintain their accuracy.
- 4) Materials are supplied with test certificate as per approved QAP. Test certificates incorporate chemical composition, mechanical properties, hardness detail of heat treatment, Ultrasonic test, Radiography test and stamping details.

(NICKEL BASE ALLOYS) GUIDE TO APPLICATIONS

NICKEL 200	Commercial pure wrought Nickel for the construction of chemical plant
NICKEL 201	A low-carbon grade of nickel free from the stress- corrosion cracking associated with graphitisation in chemical plant operating at temperatures above 300°C, e.g. caustic soda plant.
NICKEL 205	A high-purity nickel for anodes, plants and grids of electronic valves and for magnetostrictive transducers.
NICKEL 212	Slightly stiffer than pure nickel, used for electrode support wires in radio valves and tungsten filament lamps.
NICKEL 222	A cathode nickel for the sleeves of indirectly heated, oxide-coated cathodes in radio valves.
NICKEL 270	A high-purity nickel with a minimum temperature - coefficient of resistance of 0.006°C over the range 0.100°C. Made by the powder metallurgy process. Used for components of special valves., such as hydrogen thyratrons and for electric resistance thermometers and controls.
MONEL alloy 400	A general engineering alloy with good resistance to corrosion by sea water, sulphuric, hydrochloric and phosphoric acids, pharmaceutical products, ammonium sulphate, fatty acids, etc. It retains its strength and toughness up to about 4500°C and is used for chemical, steam and petroleum plant, marine and pickling equipment,
MONEL alloys K-500	An alloy with similar corrosion-resistance to MONEL alloy 400 but amenable to precipitation hardening to give high strength. Used for propeller and pump shafts, bolts, doctor blades and valve spindles.
CAST MONEL alloys	Cast alloy pig supplied for foundry addition to silicon. For corrosion-resistance castings.
INCONEL alloy 600	This alloy has excellent mechanical properties and oxidation-resistance at high temperatures. It is used for furnace parts, heat-treatment equipment, heating element sheathing in nuclear engineering and in the construction of chemical plant.
INCONEL alloy 625	An alloy with high strength and toughness from cryogenic temperatures to 100°C in addition to good oxidation-resistance. It resists attack by other media and is virtually immune to chloride-stress corrosion cracking. It is used in aerospace and is being evaluated for chemical and marine engineering.
INCOLOY alloy 800	This alloy resists hydrogen/hydrogen sulphide corrosion and chlorides stress corrosion cracking. It is based for pigtails and headers and hydrocarbon "cracker" tubes for other high-temperature processing equipment.
INCOLOY alloy 825	This product resists corrosion by acids and alkalies in either reducing or oxidising conditions. It is resistant to stress-corrosion cracking and pitting and used for chemical plant and pickling plant. A nickel iron cobalt alloy combining a low coefficient of expansion and higher inflection temperature with higher strength than is usual in this composition range. It is being evaluated for such applications as diesel engine piston crowns compensating members in gas turbine engines and controlled clearance rotating machinery parts.
INCOLOY alloy Ds	A general purpose heat resisting alloy with particular resistance to carburisation and alternating carburisation and oxidation. It is used for furnace parts, heat treatment and vitreous enamelling equipment.

New designation established in accordance with Practice E 527 and SAE J 1086.

Maximum, unless otherwise indicated. The method of analysis for nitrogen shall be a matter of agreement between the purchaser and manufacturer.

For welded TP316, TP316N, TP316LN, and TP316H pipe, the nickel range shall be 10.0-14.0 %. For small diameter or thin walls or both, where many drawing passes are required, a carbon maximum of 0.040 % is necessary in grades TP304L and TP316L. Small diameter tubes are defined as those less 0.500 in (12.7mm) in outside diameter and light wall tubes as those less than 0.049 in (1.20 mm) in average wall thickness (1.10 mm) in minimum wall thickness.

The titanium content shall not be less than five times the carbon content and not more than 0.70 %. The titanium content shall be not be less than four times the carbon content and not more than 0.60 %. The columbium plus titanium content shall be not less than ten times carbon content and not more than 1.00 %.

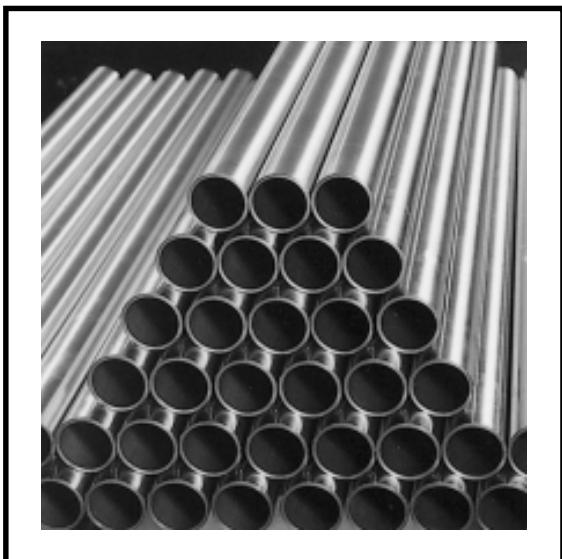

The columbium plus titanium content shall be not less than eight times carbon content and not more than 1.00 %.

For welded pipe, the phosphorus maximum shall be 0.045 %. Grade S34751 shall have a columbium (Niobium) plus tantalum content of not less than 15 times the carbon content.

1) Valid for SEW 470
2) DIN 17459

3) Sanicro 31 H
4) Valid for SEW 400

5) NFA 49-317 with min 45% can be fulfilled
6) Is replacing 8R30 in our stock standard programme
7) Is replacing 8R70 in our stock standard programme

Designation of Grades according to EN is pending
In brackets, nearest equivalent steel grade.
Other steel grades may be produced on request.

- A) Maximum unless range or minimum is indicated.
- B) Designation established in accordance with practice E 527 and SAE J 1086.
- C) Unless otherwise indicated, a grade designation originally assigned by the American Iron and Steel Institute (AISI)
- D) Carbon analysis shall be reported to nearest 0.01% except for the low-carbon type, which shall be reported to nearest 0.001 %
- E) The terms Columbium (Cb) and Niobium (Nb) both related to the same element.
- F) When two minimums or two maximums are listed for a single type, as in the case of both a value from a formula and an absolute value, the higher minimum or lower maximum shall apply.
- G) Common name, not a trademark, widely used, not associated with any one producer.
- H) Iron shall be determined arithmetically by difference of 100 minus the sum of the other specified elements.
- I) (Al + Ti) 0.85- 1.20
- J) Naming system developed and applied by ASTM.
- K) Cr + 3.3 Mo + 16 N = 40 min
- L) S40900 (Type 409) has been replaced by S40910, S40920, and S40930, Unless otherwise specified in the ordering information, an order specifying S40900 or Type 409 shall be satisfied by any one of S40910, S 40920 or S40930 at the option of the seller, Material meeting the requirements of S40910, S40920 or S40930, may at the option the manufacturer be certified as S40900.
- M) Plate version of CA-6NM
- N) Product (Check or verification) analysis tolerance over the maximum limit for C and N in XM-27 shall be 0.002 %.

- A) Unless otherwise indicated, a grade designation originally assigned by the American iron and Steel Institute (AISI).
- B) Yield strength shall be determined by the offset method at 0.2% in accordance with Test Methods with Test Definitions A 370. Unless otherwise specified (see specification A 480/A, 480, paragraph 4.1.11, Ordering information), an alternative method of determining yield strength may be based on total extension under load 0.5%.
- C) Either Brinell or Rockwell B Hardness is permissible.
- D) Bend test are required to chromium steels (ferritic or martensitic) thicker than 1 in. (25 mm) or for any austenitic or duplex (austenitic-ferritic) stainless steels regardless of thickness.
- E) Elongation for thickness, less than 0.015 in. (0.38 mm) shall be 20% minimum, in 1 in (25.4 mm)
- F) Common name, not a trademark, widely used, not associated with any one producer.
- G) Yield strength requirements shall not apply to material under 0.020 in (0.50 mm) in thickness.
- H) Not applicable for thickness under 0.010 in. (0.25 mm)
- I) Type 201 is generally produced with CHEMICAL COMPOSITION BALANCED FOR RICH SIDE (type 201-1) OR LEAN SIDE (Type 201-2) AUSTENITE STABILITY DEPENDING ON THE PROPERTIES REQUIRED FOR SPECIFIC APPLICATION.
- J) Rockwell C scale.
- K) For S32615, the grain size a determined in accordance with the Test Methods E 112, Comparison Method, Plate II, shall be No. 3 or finer.
- L) Naming system developed and applied by ASTM
- M) Prior to Specification A 240-89b, the tensile value for S32950 was 90 ksi.
- N) S40900 (Type 409) has been replaced by S40910, S40920, and S40930. Unless otherwise specified in the ordering information, an order specifying S40900 or Type 409 shall be satisfied by any one of S40910 S40920, S40930 at the option of the seller, Material meeting the requirements of S40910, S40920, or S40930, may at the option of the manufacturer be certified as S40900.
- O) Material 0.050 in (1.27 mm) and under in thickness shall have a minimum elongation of 20 %.

*1. Refer to Note *1 ASTM A.455.

*2.(1) Refer to Note *2 for ASTM A.455

(2) For plates over 3.5 in. (88.9 mm) in thickness, a deduction of 0.5% from the specified percentage of elongation in 2 in. (50 mm) shall be made for each increase of 0.5 in. of the specified thickness over 3.5 in. This deduction shall not exceed 3%.

Heat Treatment	<p>*1. Grade 60 plate 0.50 in (13 mm) and under in thickness may be specified to have 0.85-1.20% manganese on heat analysis.</p> <p>*2. Refer to Note *1 for ASTM A. 455.</p> <p>*3. Refer to Note *2 for ASTM A. 455.</p>
Fine grain practice.	<p>1. plate 1.50 in (38 mm) and under in thickness are normally supplied in the as-rolled condition.</p> <p>2. plate over 1.50 in. in thickness shall be normalized.</p>

- 1). The carbon content for plates over 5 inch (127 mm) in thickness is 0.17% max. on product analysis.
- *2). a) For plates under 0.312 inch (7.92 mm) in thickness, a deduction of 1.25% from the specified percentage of elongation shall be made for each decrease of 0.031 inch (0.79 mm) of the specified thickness under 0.312 inch.
 - b) For plates over 3.5 inch (88.9 mm) in thickness, a deduction of 0.5% from the specified percentage of elongation in 2 inch (50 mm) shall be made for each increase of 0.05 inch of the specified thickness over 3.5 in this deduction shall not exceed 3%
 - c) For plates upto the including 3/4 inch thickness, if the percentage of elongation of an 8 inch or 200 mm gauge length test specimen falls not more than 3 % below tyhe amount prescribed, the elongation shall be considered satisfactory provided the percentage of elongation in 2 inch (50 mm) across the break is not less than 25 %.
- *3). Measured on round test specimen.
- *4). Measured on flat test specimen
- *5). Applicable to annealed and normalised-tempered materials
- *6). Not applicable to annealed material

IS : 1239 (PART 1) - 1979 MILD STEEL TUBES
MAXIMUM PERMISSIBLE PRESSURE AND TEMPERATURE
FOR TUBES FOR CONVEYING STEAM

The maximum permissible pressure and temperature for tubes with screwed and socketed joints shall be as follows.

MAXIMUM PERMISSIBLE PRESSURE AND TEMPERATURE FOR TUBES WITH STEEL COUPLINGS OR SCREWED AND SOCKETED JOINTS			
Nominal Bore mm	Maximum Permissible Pressure N/mm²	Maximum Permissible Kg/cm²	Temperature °C
Up to and including 25 mm	1.20	12.24	260
Over 25 mm up to and including 40 mm	1.03	10.50	260
Over 40 mm up to and including 80 mm	0.86	8.77	260
Over 80 mm up to and including 100 mm	0.69	7.04	260
Over 100 mm up to and including 125 mm	0.69	7.04	171
Over 125 mm up to and including 150 mm	0.50	5.10	160

For tubes fitted with appropriate flanges or suitably butt welded together, the maximum permissible pressure shall be 21.00 Kg/cm² and the maximum permissible temperature 260°C.

BEND TEST FLATTENING TEST

Bend Test on tubes up to and including 50 mm Nominal Bore - When tested in accordance with IS: 1239-1963, the finished tubes shall be capable of withstanding the bend test without showing any signs of fracture or failure. Welded tubes shall be bent with the weld at 90° to the plane of bending. The tubes shall not be filled for this test.

Ungalvanized tubes shall be capable of being bent cold, without cracking, through 180° round a former having a radius at the bottom of groove, in the plane of bending, equal to six times the outside diameter of the tube.

Galvanized tubes shall be capable of being bent cold, without cracking, through 90° round a former having a radius at the bottom of the groove, equal to eight times the outside diameter of the tube.

Flattening Test on Tubes above 50 mm Nominal Bore - Rings, not less than 40 mm in length, cut from the ends of selected tubes, shall be flattened between parallel plates with the weld if any at 90° (Point of maximum bending) in accordance with IS: 1239-1963. No opening shall occur by fracture in the weld until the distance between the plates is less than 75 percent of original outside diameter of the pipe and no cracks or breaks in the metal elsewhere than in the weld shall occur until the distance between the plates is less than 60 percent of the original outside diameter.

Tolerances on Thickness and weight :

The following manufacturing shall be permitted on the tubes and sockets.

(a) Thickness :

(1) Butt welded Light tubes +Not limited

-8 percent

Medium and Heavy tubes +Not limited

-10 percent

(2) Seamless tube -12.5 percent

(b) Weight:

(1) Single tube (light series) + 10percent

-8 percent

(2) single tube (medium and heavy series) ± 10 percent

HOLLOW SECTION,

Grade:

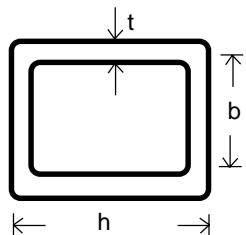

- EN 1,4301 / AISI 304
- EN 1,4571 / AISI 316 Ti
- EN 1,4404 / AISI 316L
(also available as STALA 350 grade)
- Duplex steel and high-alloy austenitic steel
grades available to order

Surface finish grades

- hot or cold-rolled (lightly brushed)
- standard ground finish Grit 220 or 320
- to special order, Grit 80 -500 ground finish
- pickled finish
- other surface finishes to order

Dimensions of hollow sections

- wall thickness 1,2 to 6mm
- square hollow sections 25 x 25 mm to 150 x 150mm
- rectangular hollow sections 30 x 20 mm to 200 x 100 mm
- thick wall small-dimension sections such as 50 x 50 x 6.0 mm available to special order.

DIMENSIONAL TOLERANCES FOR FORGED STEEL FLANGES

Threaded, lap joint, slip-on and Blind Flanges
ANSI B 16.5

Welding neck flanges
ANSI B 16.5

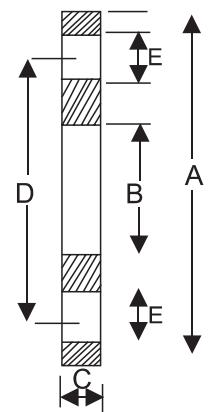

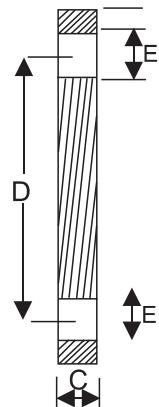

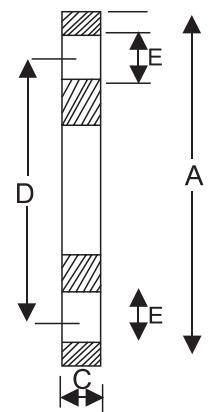

This tolerance not covered by
ANSI B 16.5

Outside Diameter (A)	When O.D. is 24" or less	$\pm 1/16^{**}$	Outside Dia. of Hub (F)	12" and smaller	$+3/32^{**}-1/16^{**}$
	When O. D. is over 24"	$\pm 1/8^{**}$		Over 12"	$\pm 1/8^{**}$
Inside Diameter (D)	Threaded	Within limits on Boring gauge	Drilling	Bolt Circle	$\pm 1/16^{*}$
	Slip on and Lap Joint	10" and smaller $+ 1/32", -0"$ 12" and larger $+ 1/16"-0"$		Bolt hole spacing	$\pm 1/32^{*}$
Diameter of Contact Face (C)	1/16 Raised Face	$\pm 1/32"$	Overall Height (E)	Eccentricity between 2 1/2" and smaller bolt circle diameter and machined facing Diameter	1/32" Max. 3" and larger 1/16" Max.
	1/4 Raised Face, Tongue and Groove of male and Female	$\pm 1/64"$		On flanges 18" and smaller	$+1/8^{**}-1/32^{**}$
Diameter of Counter bore	Same as for inside diameter		Thickness (E)	On flanges larger than 13"	$+3/15^{**}-1/16^{**}$
				13" and smaller	$41/8"-0"$
				Over 18"	$+ 3/16"-0"$
				Where allowance has been left On face for finish: All sizes	$+ 1/8^{**}-1/16^{**}$

Outside Diameter (A) smaller inside Diameter (D)	When O. D. is 24: or less	$\pm 1/16^{**}$	Drilling	Bolt Circle	$\pm 1/16"$
	When O. D. is over 24"	$\pm 1/8^{**}$		Bolt hole spacing	$\pm 1/32"$
	10" and smaller	$\pm 1/32"$		Eccentricity between 1/2" and smaller 2 1/2" and bolt circle diameter and machined facing diameter	1/32" max 3" and larger 1/16" max
Diameter of Contact Face (C)	12" to 18"	$\pm 1/16$		Width of Land	All sizes
	Over 18"	$+ 1/8-1/16"$		Angle of Hub Bevel	All Sizes $\pm 2\frac{1}{2}"$ 18" and smaller $\pm 1/16"$
Diameter of Hub at Point of Welding (G)	1/16" Raised Face	$\pm 1/32"$		Overall Height (E)	12" and larger $\pm 1/8"$
	1/4" Raised face, Tongue and Groove, or Male and Female	$\pm 1/64"$			10" and smaller $+ 1/8"-0"$
Diameter of Hub at Base (F)	5" and smaller	$+3/32"-1/32"$	Thickness (E)	Thickness (E)	Over 18" $+ 3/16"-0"$
	5" and larger	$+5/32"-1/32$			Where allowance has been left on face for Finish, All size $+1/8^{**}-1/16^{**}$
	When "F" is 24" and smaller	$\pm 1/8^{**}$			
	When "F" is over 24"	$\pm 1/8$

32 to 48	+7	4.8		5	5	10	10	7	2	--	--		

Nominal Pipe Size (NPS)	Angularity - Tall	
	Off Angle Q	Off Plane P
1/2 to 4	1	2
5 to 8	2	4
10 to 12	3	5
14 to 16	3	7
18 to 24	4	10
26 to 30	5	10
32 to 42	5	13
44 to 48	5	20

GENERAL NOTE : Dimensions are in millimeters (expect NPS) tolerances are equal plus minus except as noted.

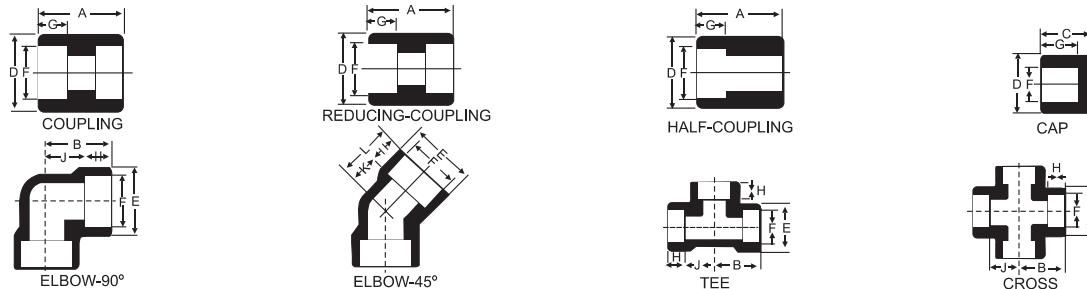

NOTES :

- Out of round is the sum of absolute values of plus and minus tolerance.
- This tolerance may be exceed in localized area of formed fittings where increased wall thickness is required to meet design requirements of para 2.2.
- The inside diameter and the nominal wall thickness at ends are to be specified by the purchaser.
- Unless otherwise specified by the purchaser, these tolerances apply to the nominal inside diameter, which equals the difference between the nominal outside diameter and twice the nominal wall thickness.

FORMULAE

- 1) WEIGHT OF STAINLESS STEEL PIPES & TUBES

$$\text{OD (mm)} - \text{W.T. (mm)} \times \text{W.T. (mm)} \times 0.02466 = \text{Kg. per Mtr.}$$
- 2) SHEET WIDTH REQUIRED FOR ROLLED AND WELDED PIPES

$$\text{O.D. (mm)} - \text{THK (mm)} \times 3.14 = \text{Sheet Width}$$
- 3) WEIGHT OF STAINLESS STEEL SHEETS

$$\text{Length (mtr.)} \times \text{Wdth (mrt.)} \times \text{Thk (mm)} \times 8 = \text{Kg Per Sheet}$$
- 4) WEIGHT OF STAINLESS STEEL CIRCLE & BLANKS

$$\text{O.D. (mm)} \times \text{O.D.} > \text{(mm)} \times \text{Thk (mm)} / 160/1000 = \text{Kg Per Pcs.}$$
- 5) WEIGHT OF STAINLESS STEEL ROUNDS

$$\text{Dia. (mm)} \times \text{Dia. (mm)} \times 0.00623 = \text{Per Mtr.}$$
- 6) WEIGHT OF STAINLESS STEEL HEXAGONAL RODS

$$\text{Dia. (mm)} \times \text{Dia. (mm)} \times 0.00679 = \text{Per Mtr.}$$
- 7) WEIGHT OF STAINLESS STEEL SQUARE BARS

$$\text{Dia. (mm)} \times \text{Dia. (mm)} \times 0.00787 = \text{Kg Per Mtr.}$$
- 8) WEIGHT OF CARBON STEEL PIPES & TUBES

$$\text{O.D. (mm)} - \text{W.T. (mm)} \times \text{W.T. (mm)} \times 0.02466 = \text{Kg. Per Mtr.}$$
- 9) WEIGHT OF CARBON STEEL SHEETS - PLATES

$$\text{Length (mtr.)} \times \text{Width (mtr.)} \times \text{Thk (mm)} \times 7.85 = \text{Kg. Pert Sheet}$$
- 10) WEIGHT OF COPPER PIPES

$$\text{O.D. (mm)} - \text{W.T. (mm)} \times \text{W.T. (mm)} \times 0.0256 = \text{Kg. Per Mtr.}$$
- 11) WEIGHT OF LEAD PIPES (appro.)

$$\text{O.D. (mm)} - \text{W.T. (mm)} \times \text{W.T. (mm)} \times 0.0345 = \text{Per Mtr.}$$
- 12) WEIGHT OF LEAD SHEETS (appro.)

$$\text{Length (mtr.)} \times \text{Width (mtr.)} \times \text{Thk (mm)} \times 11.2 = \text{Kg. Per Sheet}$$
- 13) WEIGHT OF ALLUMINIUM PIPES (appro.)

$$\text{O.D. (mm)} - \text{W.T. (mm)} \times \text{W.T. (mm)} \times 0.0082 = \text{Kg. Per Mtr.}$$
- 14) WEIGHT OF ALLUMINIUM SHEETS (appro.)

$$\text{Length (mtr.)} \times \text{Width (mtr.)} \times \text{Thk (mm)} \times 2.66 = \text{Kg Per Sheet}$$

High Conductivity Free Machining Copper Rods

(LEADED COPPER)

CHEMICAL REQUIREMENTS

Copper	Remainder
Lead	0.6 to 1.0%
Impurities	0.2% Max.

PHYSICAL PROPERTIES

*Tensile strength	23 to 35 kg
Elongation	45 to 10%
Electrical conductivity at 20°C	94 to 98%

FABRICATION PROPERTIES

Capacity for being cold worked	Fair
Hot formed	Good
Machineability rating (Free cutting brass-100)	80
Suitability for Brazing	Good
Soldering	Good

USES

Threaded-machine components and parts requiring high conductivity, extensive machining and low friction resistance; electrical connectors, motor switch components etc.

(TELLURIUM COPPER)

as per BS 2874 C 109)

CHEMICAL REQUIREMENTS

Copper	Remainder
Tellurium	0.3 to 0.7%
Impurities	0.2%-Max.

PHYSICAL PROPERTIES

**Tensile strength	23 to 35 kg
Elongation	45 to 10%
Electrical conductivity at 10°C	94 to 98% IFC

FABRICATION PROPERTIES

Capacity for being cold worked	Fair
Hot formed	Good
Machineability Rating (Free cutting brass-100)	80
Suitability for Brazing	Good
Soldering	Good

USES

Threaded-machine components and parts requiring high conductivity, extensive machining and low friction resistance, electrical connectors, motor, switch components, etc. requiring high softening temperature.

* Material can be supplied in any temper as required by customers.

** Customers to specify temper required

Copper-Nickel-Alloy Rods

as per ASTM B : 411—64

CHEMICAL REQUIREMENTS

Nickel	1.6 to 2.2%
Silicon	0.4 to 0.8%
Lead	0.1% Max
Iron	0.1% Max
Zinc	0.5% Max
Copper	Balance

PHYSICAL PROPERTIES

Tensile strength	63 kgs/mm ² -Min
Elongation	8%-Min

FABRICATION PROPERTIES

Capable of being precipitation hardened

USES

Components requiring low friction and wear qualities.

Copper Rods & Tubes For General Engineering Purposes

(Phosphorus deoxidised non-arsenical)

as per IS 4171 — 1966

BS 2874 — C 106

CHEMICAL REQUIREMENTS

Copper	99.85%-Min. (including silver)
Phosphorus013 to .050%
Arsenic05%-max.
Nickel01%-max.
Other impurities06%-max.

PHYSICAL PROPERTIES

Tensile strength	23 to 35 kgs/mm ²
Elongation	45 to 8%

FABRICATION PROPERTIES

Capacity for being Cold worked	Excellent
Hot formed	Excellent
Machineability	Poor
Suitability for Brazing	Good
Soldering	Good

USES

Condensers, evaporators and other heat exchanger tubes, brewery tubes, gas lines, oil burner tubes, steam, water, vapour lines etc.

Nickel Silver Alloy Rods

as per BSS 2874—1969 NS 101

CHEMICAL REQUIREMENTS

Copper	44.0 to 47.0%
Lead	1.0 to 2.5%
Iron	0.40% max
Nickel	9.0 to 11.0%
Manganese	0.20 to 0.50%
Zinc	Balance

PHYSICAL PROPERTIES

Tensile strength	47 kgs/mm ² -Min.
Elongation	8%-Min.

FABRICATION PROPERTIES

Capacity for being hot formed	Excellent
Capacity for being cold worked	Fair
Machineability rating (Free cutting brass-100)	80
Suitability for Soldering	Excellent
Brazing	Good

USES

Telecommunications, Flatware and holloware, Architectural and ornamental applications, keys, locks and small machined component where corrosion resistance and decorations are desired.

High Conductivity Wear Resistance

Copper Rods (Cadmium Copper)

CHEMICAL REQUIREMENTS

Copper	Remainder
Cadmium	0.5 to 1.27%
Total impurities	0.05%

PHYSICAL PROPERTIES

Tensile strength	26 to 63 kgs/mm ²
Elongation	45 to 2%
Electrical conductivity at 20°C	80 to 97% IACS.
Machineability rating (Free cutting brass-100)	40
Suitability for Brazing	Good
Soldering	Good
Wear resistance	Excellent

Electrode holders for resistance welding machines, arc furnaces, electrodes for spot seam welding and aluminium alloys; commutator bars, springs carrying electric current, switch gear and components for other equipment requiring high conductivity with greater strength and resistance to wear.

Free Cutting Brass Rods

as per BS 2874—CZ 124

CHEMICAL REQUIREMENTS

Copper	60.0 to 63.0%
Lead	2.5 to 3.7%
Zinc	Balance

PHYSICAL PROPERTIES

Tensile strength	28 Kgs./mm ² .min.
Elongation	12% min.

FABRICATION PROPERTIES

Capacity for being cold worked	Poor
Capacity for being hot formed	Fair
Machineability Rating (Free cutting Brass-100)	100
Suitability for Soldering	Excellent
Brazing	Good

USES

Hardware, Gears, Pinions, Automatic High Speed Screw Machine Parts.

as per IS: 319, (BS : 249) BS 2874—CZ 121

CHEMICAL REQUIREMENTS

Copper	55.0 to 60.0%
Lead	2.0 to 3.5%
Zinc	Balance

PHYSICAL PROPERTIES

Tensile strength	39 kgs/mm ² .min. (25 Tons/Sq. in.)
Elongation	15%-min.

FABRICATION PROPERTIES

Capacity for being cold worked	Poor
Capacity for being hot formed	Fair
Machineability Rating (Free cutting Brass-100)	90
Suitability for Soldering	Excellent
Brazing	Good

USES

Architectural Extrusions, Thresholds, Butts, Hinges, Lock bodies, Screws, Nuts and Bolts.

Naval Brass Rods

(Forging Quality)

as per IS 291 — 1961 Gr. I
(BS : 2874 / 1969 CZ : 112) BS 251 / 1963

CHEMICAL REQUIREMENTS

Copper	61.0 to 64.0%
Tin	1.0 to 1.5%
Zinc	Balance

PHYSICAL PROPERTIES

Tensile strength	35 kgs /mm ² -min. (22-26 Tons/Sq. in.)
Elongation	18% min.

FABRICATION PROPERTIES

Capacity for being cold worked	Fair
Capacity for being hot formed	Good
Hot forgeability Rating (Forging Brass-100)	80
Machineability Rating (Free cutting Brass-100)	30
Suitability for Brazing	Excellent
Soldering	Excellent
Oxy Acetylene Welding	Good

USES

Balls, Bolts, Marine hardware, Nuts, Propeller, Shafts, Rivets, Valve Stems, Welding rods.

(Machining and general purposes other than forging quality)

as per IS 291 — 1961 Gr. 2
(ES 2874 — 1969 CZ 113) BS 252 — 1963

CHEMICAL REQUIREMENTS

Copper	59.62%
Tin	0.5-1%
Lead	0.5-1%
Zinc	Balance

PHYSICAL PROPERTIES

Tensile strength	35 kgs./mm ² -min.
Elongation	16%

FABRICATION PROPERTIES

Capacity for being cold worked	Fair
Capacity for being hot formed	Fair
Machineability rating(Free cutting Brass-100)	70
Suitability for Brazing	Excellent
Soldering	Excellent
Welding	Good

USES

Condenser plates, piston rods, nuts, bolts, rivets and other marine machined hardware not involving forging operation.

Lead Free (Rivetting) Brass Rods

as per BS 2874—CZ 109 (BS 1949)

CHEMICAL REQUIREMENTS

Copper	59.62%
Zinc	Balance
PHYSICAL PROPERTIES				
Tensile strength	34 kgs/mm ² -Min. (22 Tons/Sq. in.)
Elongation	26% Min.
FABRICATION PROPERTIES				
Machineability Rating (Free cutting Brass-100)	55
Bending	Excellent
Rivetting	Excellent
Forging	Excellent

USES

A ductile alloy with good cold working properties suitable for bending and punching Rivets, boltings, valve stems, tubing for heat exchangers, brazing rods and hot forgings.

High Tensile Brass Rods

as per BS 2874 1969 CZ 114 (BS 250)

CHEMICAL REQUIREMENTS

Copper	56.0 to 60.0%
Tin	0.2 to 1.0%
Iron	0.25 to 1.2%
Manganese	0.3 to 2.0%
*Lead	0.5 to 1.5%
Aluminium	1.50% Max.
Zinc	Balance

PHYSICAL PROPERTIES

Tensile Strength	47 kgs/mm ² -Min. (30 Tons/Sq. in.)
Elongation	18%-Min.

FABRICATION PROPERTIES

Capacity for being cold worked	Fair
Capacity for being hot worked	Good
Machineability Rating (Free cutting brass-100)	30
Wearing Properties	Good
Resistance to Corrosion	Excellent
Suitability for Soldering	Fair

USES

Balls, Clutch discs, pump rods, shafts, valve stems and bodies, welding rods and such other components requiring high strength and excellent resistance to corrosion.

* If the material is required with lower lead Content than that specified. it may be ordered with a maximum lead content of either 0.1% (lead-free grade or 0.5%).

High Tensile Forging Brass Suitable for Soldering

as per BS 2872 1969—CZ 115 (BS 1001)

CHEMICAL REQUIREMENTS

Copper	56.0 to 60.0%
Tin	0.6 to 1.1%
Iron	0.25 to 1.2%
Manganese	0.3 to 2.0%
Lead	0.5 to 1.5%
Aluminium	0.2% Max.
Zinc	Balance

PHYSICAL PROPERTIES

Tensile strength	55 kgs/mm ² -Min. (35 Tons/Sq. in.)
Elongation	12% Min.

FABRICATION PROPERTIES

Capacity for being cold worked	Fair
Capacity for being hot worked	Good
Machineability rating (Free cutting brass-100)	30
Wearing properties	Good
Resistance to Corrosion	Excellent
Suitability for Soldering	Excellent

USES

Forgeings requiring high tensile strength and soldering properties.

HIGH TENSILE BRASS RODS
as per IS : 320—1962

	Alloy-1 percent	Alloy-2 percent	Alloy-3 percent
CHEMICAL REQUIREMENTS			
Copper	56.0 to 59.0	56.0 to 59.0	57.0 to 61.0
Tin*	*0.75 to 1.75	*0.5 max	*1.0 max
Lead	@0.5 max	@1.0 max	@0.75 to 1.0
Iron	1.25 max	0.7 to 1.2	0.25 to 1.0
Manganese	20.0 max	0.5 to 1.2	0.5 to 1.2
Nickel	—	—	—
Aluminium	0.2 max	0.2 to 1.2	0.5 to 2.0
Other elements	0.5 max	0.5 max	0.5 max
Zinc	Remainder	Remainder	Remainder
PHYSICAL PROPERTIES			
Tensile Strength (Kg/mm ²) min.		Alloy-1 53	Alloy-2 47
Elongation (percent) min.		15	15
FABRICATION PROPERTIES			
Similar to CZ 115			Similar to CZ 114
USES			
Alloy 1—suitable for soldering.			
Alloy 2—less easily soldered.			
Alloy 3—suitable for machining.			
*Tin is not to be intentionally added			

Leaded Brass Rods
(Drilling and Turning Quality)
as per MS 53—DIN 1756

	56.5 to 59.5%
Copper	1 to 3%
Lead	Remainder
PHYSICAL PROPERTIES				
Tensile strength	39 to 50 kgs/mm ²
Elongation	9 to 15%
FABRICATION PROPERTIES				
Suitability for cold forming	Fair
Suitability for hot forming	Good
Machining, drilling etc.	Very good
Resistance to wear	Poor
Suitability for soldering	Good
USES				
For machined components manufactured at high speeds on automatic Capstan Lathes, drilling, shaping or milling machines and which are not subjected to bending.				

Forging Brass Rods
as per IS 3488—66, (BS—218—63)

	56.5 to 60.0%
Copper	1.0 to 2.5%
Lead	Balance
MECHANICAL PROPERTIES				
Tensile strength	35 kgs/mm ² -Min (22 Tons/Sq. in.)
Elongation	25% Min.
FABRICATION PROPERTIES				
Capacity for being cold worked	Poor
Capacity for being hot formed	Excellent
Hot forgeability Rating(Forging Brass-100)	100
Machineability Rating (Free cutting Brass-100)	80
Suitability for Soldering	Excellent
Brazing	Good
USES				
Forgings and pressings of all kinds for components requiring free cutting as well as forging quality.				

Brass Tubes 63/37
 for General Purposes
 as per IS 407—1966 (Alloy 2)

C CHEMICAL REQUIREMENTS

Copper + incidental nickel	59.63%
Lead	0.80% max.
Iron	0.07% max.
Arsenic	0.06% max.
Other impurities	0.30% max.
Zinc	Remainder

PHYSICAL PROPERTIES

Tensile strength Annealed	29.38 kg/mm ²
Half hard	38. kg/mm ² -Min.

hard

Bending, Drifting,

Flattening properties:

Hydraulic & Mercurous

Nitrate test:

As per IS 407

As per IS 407

USES

US	Heat exchangers
----	-----------------

*Ti

Manganese Bronze Rods
 as per ASTM B 138-58

CHEMICAL REQUIREMENTS

CH	Copper	Alloy A		Alloy B
		%	%	%
	Tin	57-60		63-68
	Iron	0.5-1.5		0.5 max
	Aluminium	0.8-2		2-4
	Manganese	0.25 max		3-6
	Zinc	0.05-0.5		2.5-5
		Remainder		Remainder

PH PHYSICAL PROPERTIES

	Alloy A	80 kgs/mm ² -Min.
	Alloy B	
	Elongation	25%-Min.
	Alloy A	10%-Min.
	Alloy B	

USES

US	Extra Heavy-duty high strength alloy for large valves, stems, gears bearings, shafting and hydraulic cylinder parts.
----	--

Aluminium Bronze Rods

as per BS 2874—CA : 103 (BS 2032)

CHI CHEMICAL REQUIREMENTS

CHI	Aluminium	8.8 to 10.0%
	Iron + Nickel	4% Max
	Manganese	0.5% Max
	Copper	Balance

MEC PHYSICAL PROPERTIES

FAB	Tensile strength	53 kgs/mm ² -Min. (34 Tons/Sq. in.)
	Elongation	22%-Min.

FABRICATION PROPERTIES

US	Capacity for being Cold worked	Fair
	Capacity for being hot formed	Excellent
	Machineability Rating (Free machining brass-100)	35
	Suitability for Brazing	Poor
	Soldering	Poor
	Welding (Arc)	Good

USES

1. Acid resisting mine pumps, Bearings, Valve seats etc.
2. Corrosion resistant parts, marine hardware, heat-resistant applications, wear and high strength nuts, bolts, stringers and threaded parts.

Maruti Metal Industries

as per BS 2874—CA : 104 (BS 2033)

CHEMICAL REQUIREMENTS

Aluminium	8.5 to 11.0%
Nickel	4.0 to 6.0%
Iron	4.0 to 6.0%
Manganese	0.5% Max.
Copper	Balance

PHYSICAL PROPERTIES

Tensile strength	71 kgs/mm ² -Min. (45 Tons/Sq. in.)
Elongation	12% Min.

FABRICATION PROPERTIES

Capacity for being cold formed	Poor
Capacity for being hot formed	Good
Machineability rating (Free machining brass-100)	35
Suitability for Brazing	Fair
Soldering	Poor
Welding	Good

USES

- Excellent corrosion resistant alloy, mainly used in propeller hubs, blades and other parts in contact with salt water.
- Valve guides and seats in air-craft engines.
- Gear blanks and high pressure Valves, Bearings etc.
- Heat Exchangers.

Aluminium Silicon Bronze Rods

as per ASTM B 283—56

CHEMICAL REQUIREMENTS

Aluminium	6.5 to 8.0%
Silicon	1.5 to 3.0%
Copper	89% Min.

PHYSICAL PROPERTIES

Tensile Strength	67 kgs/mm ² -Min.
Elongation	25%-Min.

FABRICATION PROPERTIES

Machineable Aluminium Bronze with high strength, good corrosion resistance and low co-efficient of friction.

Forgeability Rating 75%

USES

Hot forged components, propeller shaft bearings etc.

High Conductivity Electrolytic Copper Rods & Tubes

as per BS 2874—1969, C 101

BS 1977—1963 (Tubes)

CHEMICAL REQUIREMENTS

Copper	99.9%-Min. (inclusive of silver)
Lead	0.005%
Total impurities	0.03% (excluding oxygen)

PHYSICAL PROPERTIES

*Tensile strength	23 to 35 kgs/mm ²
Elongation	55 to 6%
Electrical conductivity at 20°C	101% IACS (annealed)

FABRICATION PROPERTIES

Capacity for being Cold worked	Excellent
Hot formed	Excellent
Machineability	Poor
Suitability for Silver brazing	Good
Soldering	Good

(In an inert or slightly oxidizing condition.)

USES

Electrical conductors switches, terminals, gaskets, radiators, cotter pins, nails, rivets, tubes etc., requiring high electrical/thermal conductivity.

* Material can be supplied in any temper as required by customers.

BRITISH STANDARD SPECIFICATIONS* FOR THE PRINCIPAL NON-FERROUS CASTING ALLOYS—(Contd.)

Alloy	Specification	Percentage Chemical Composition	Physical Properties	Allied Specifications	Remarks
Aluminium Bronze	B.S. 1400 : 1961 AB1	Al. 8.5-10.5% Fe. 1.5-3.5% Ni. 1.0% max. Zn. 0.5% max. Mn. 1.0% max. Total other elements. 0.3% max. Cu. remainder.	Tensile strength 32 tons per sq. in. Muntz Metal (60 : 40)	BS : 264 ASTM. No. B 111	Soft Half Hard	15-16 26-28	31-40 40-50
Hot Stamping Brass	BS : 218	Quarter Hard Half Hard	...	31.5-40 40-50
Free Cutting Brass	ASTM. No. B16	Quarter Hard Half Hard	32-33 40-42	37.44-6 44.6-52
Free Cutting Brass	IS : 319 B.S : 249	39-40
Special High Tensile Brass	SOMS-DIN 17661	Hard	60-80	85-100
Naval Brass	IS : 291 GR. A BS : 251	Quarter Hard	20-22	35-45

BRAZING AND

Description	Condition	Ultimate Tensile Strength Kg/Sq. mm.
Silver Solder	Cold Rolled	30-35
Easy Flow Welding Brass	Cold Rolled
Welding Brass	Cold Rolled Strip	...

Elongation % in 50 mm. gauge length	Hardness on V.P.N.	Sheer Strength Kg/Sq. mm	Remarks:
45-55	50-60	20-21	Suitable for fastner, tags, etc. and other architectural components.
55-65	50-55	25-27	Good cold-working brass used in automobile industries, hardware and ammunition components.
20-35	100-130	28-30	
2-5	190-210	42-44	
20-30	120-150	26-28	Used for architectural grill work, screw, rivetes, stencils, etc.
8-12	150-160	30-32	
40-50	80-85	25-26	Used for large nuts and bolts, Hot for-
10-25	125-135	30-32	ging, etc.
30-40	90-110	24-25	Good hot-stamping and machining
20-30	130-160	27-28	property.
22-35	100-120	...	American type of free machining brass
10-20	120-150	...	has greater impact strength than the British type. Most suitable for extra high speed machinery for automatic machines and general engineering purposes.
15-20	80-150	...	Very high speed for machining and Free cutting quality.
10-20	235-275	...	High hardness and antifriction properties used in automobile industries.
20-30	100-110	...	Better corrosion resistance than muntz metal used in marine engineering.

VELDING RODS

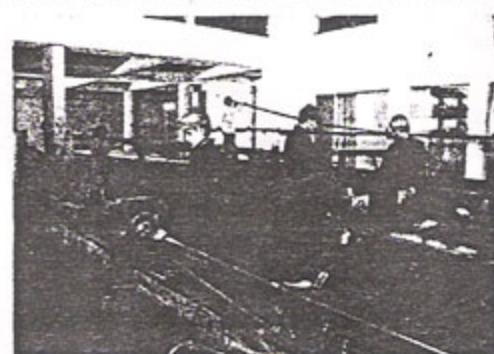

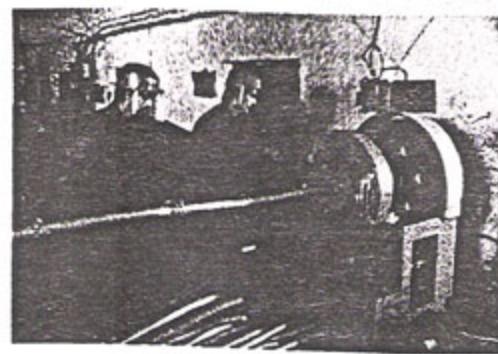

Melting Point °C.	Flow Point °C.	Remarks:
680	725	High class soldering alloy with good conductivity suitable for cable industries.
625	635	High class silver brazing alloy.
880	890	High class welding (filler) alloy used in general oxy-acetyline, welding process.
870	880	Good filler alloy for general welding process.

- Chemicals and Fertilizers
- Petrochemicals and Oil Refineries
- Electronics and Telecommunication
- Ship Building and Automotive Transport.
- Power Generation and Energy Distribution
- Machine Building and General Engineering
- Atomic Energy, Space Research and Defence

- Air Conditioners and Refrigerators
- Water Coolers and Deep Freezers
- Food Processing and Cold Storage
- Furniture Processing and Cold Storage
- Electrical and Building Hardware
- Domestic Gadgets and Home Appliances
- Writing Instruments and Office Accessories

FORMULAE FOR CALCULATION OF WEIGHT OF TUBES

Product Composition	Kilograms per foot OD & WT in INCHES	Kilograms per meter Length OD & WT in MM
COPPER	(OD - WT) X WT X 5.526	(OD - WT) X WT X 0.0281
CUPRO NICKEL	(OD - WT) X WT X 5.526	(OD - WT) X WT X 0.0281
70/30 BRASS	(OD - WT) X WT X 5.5269	(OD - WT) X WT X 0.0268
ADMIRALTY BRASS	(OD - WT) X WT X 5.269	(OD - WT) X WT X 0.0268
ALUMINIUM BRASS	(OD - WT) X WT X 5.149	(OD - WT) X WT X 0.0262

Every draw reduces diameter & wall thickness of the tube. We use Tungsten Carbide dies and plugs, ground & polished to maximum precision in our own tool room. This accounts for the well known Jugal Tubes Pvt. Ltd. quality based on accuracy of size & surface quality.

The tubes hardened by cold working are made tempered in a annealing furnace. The continuous Roller hearth. Annealing furnace is a 225 kw. with 3 heating zones, a 18.3 m. long cooling chamber and loading and unloading table. The annealed tubes are subsequently pickled.

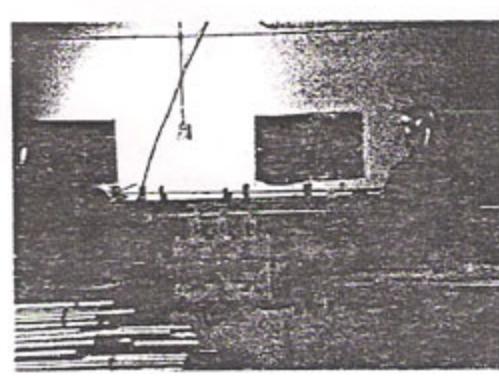

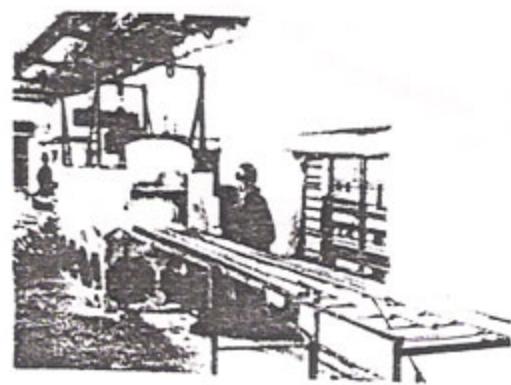

The Jugal, with a 3 Ton pulling Power and a drawing capacity from 6 mm to 15 mm is a

Combined pre-straightening, drawing, straighten-ing, cut-off, and polishing unit is fully automatic, and has all the necessary electrical controls.

With a pull of 15 Tons, the Double Push Bench by JUGAL TUBE, MUMBAI, has 6 speeds, draws two bars/tubes at a time and has a capacity from 15mm to 32mm. It is one of the most modern drawing machine in existence.

In addition we have a number of other draw-benches by reputed manufacturers with capacities ranging from 2½ tons to 50 tons pulling power and lengths varying from 7.6 m. To 18.3 m.
